COM INFO:--PVGKO mentioned that the situation of ZSSS as destination alternate of ZSPD remain unchanged as email I sent in Jul2024. Then It is not recommended to be used except only for emergency situation.

As per information about ZSSS as diversion station, please be informed as below,

1. Refuel while passenger onboard is experienced by other airlines diverting to ZSSS before which no problem.

2. Basically not allow crew and passenger disembark, but if long time concerned nec to disembark, need to

get permission from CIQ which will be considered case by case.

3. Since short of manpower for MU at ZSSS, passenger and crew handle will be quite limited.

4. If divert by weather, suppose many flights will do the same, queue to be released back to ZSPD will be expected long,

Which is subject to both ZSSS and ZSPD traffic.

VHHH:+++ (NEW) --Effective from 23 Mar 26 until further notice, applicable to all Airbus* aircraft types as follows:

Please modify altitude constraint at waypoint VH515 from "At or above 4 300 ft" to "At 4 500 ft" to reduce the probability of missed altitude constraints along the ILS approach to runway 25R.

This modification will create a pseudo continuous descent path starting at VH515 and will reduce the number of vertical transitions.
